

WE NEED TO MAKE THE ENERGY TRANSITION POSSIBLE

The government needs to reduce greenhouse gas emissions in the transport sector to counter the climate crisis.

A true alternative to cars will help the energy transition and ensure that as many people as possible can easily travel.

Public transit is both the most economical and the most ecological way to ensure that everyone has the right to mobility.

We need to invest in more public transit in our cities and between our cities!

WE NEED PUBLIC TRANSIT EVERYWHERE, ALL THE TIME!

PUBLIC TRANSIT IS NOT A BUSINESS!

It is a fully public service that benefits all of us. Public transit requires funding to fulfill its needs now and in the future.

Public transit agencies do not have deficits: they are underfunded!

The Quebec government needs to increase funding for public transit agencies so that we all have the means to achieve our goals. We all have the right to mobility, and we all want to protect the future of our planet.

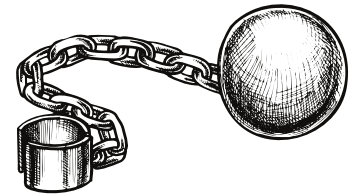

We must invest to build the public transit system that we need and deserve!

WE URGENTLY NEED PUBLIC FUNDING!

WE NEED ACCESSIBLE PUBLIC TRANSIT

Being able to move is essential to meet our needs and exercise our rights. Everyone has the right to use public transit to travel, regardless of their financial means or their abilities.

High ticket prices limit those with low and very low incomes from using public transit. Why does an essential public service have such high prices?

Each bus without a working ramp and each metro station without an elevator leads to exclusion and isolation. If we want universal access, we need more funding.

WE NEED ACCESSIBILITY FOR EVERYONE, PERIOD!
